AMENDMENT

Sir:

Please amend the above-identified application as follows:

In the Specification:

Please replace Paragraph 0026 in the Application with the following paragraph:

Mount 10 of this invention is shown in assembled form in Figure 4 and in an exploded disassembled form in Figure 1. The mount includes a support frame 12 having sides 14, bottom 16, and top 18. Sides 14, bottom 16, and top 18 are joined by suitable fasteners such as screws 20 and 20' with a mounting plate 22 being connected to bottom 16 by fasteners 24. A TV monitor 26 or a similar device is attached to mounting plate 22. A particular component regarding frame 12 is catch part 28 which forms a part of the swivel 30 connecting frame 12 to the appropriate wall or ceiling attachment which will be later described. Catch part 28 forms a component of top 18 of the frame and includes upturned side walls 32 which parallel one another in a spaced-apart relationship. Extending between side walls 32 and forming a component of the catch part is retainer 34. Retainer 34 includes an arcuate portion 36 which parallels the general transverse
